

CatEyes

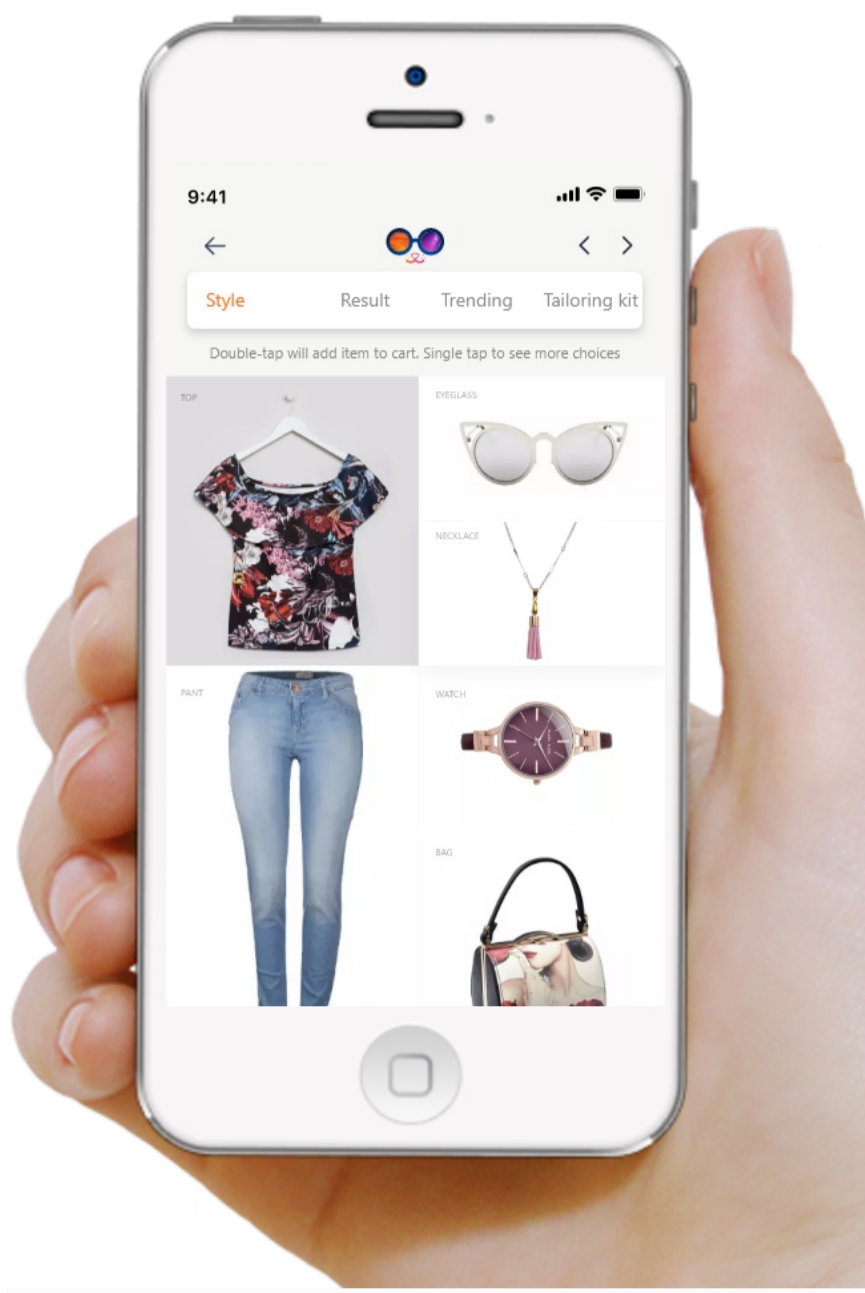

Your personal stylist mobile app.

CatEyes

It is like Shazam, but for fashion, helping women pick and plan the best fashion style everyday.

1 in 5 women find it difficult picking what style to wear for different outings consistently. While this "problem" is not on the same level smart whiz looking for the cure for cancer, it is (however) a persistent problem most women have across the world.

Project Scope

To come up with a visual communication of the client's business idea. This final visual will be in the form of high fidelity wireframe mockup of an Android and iOS mobile app. The client's need is the ultimate development of a robust and stunning visual concept for the app, and subsequently use mobile technology to code it.

UI & UX Design

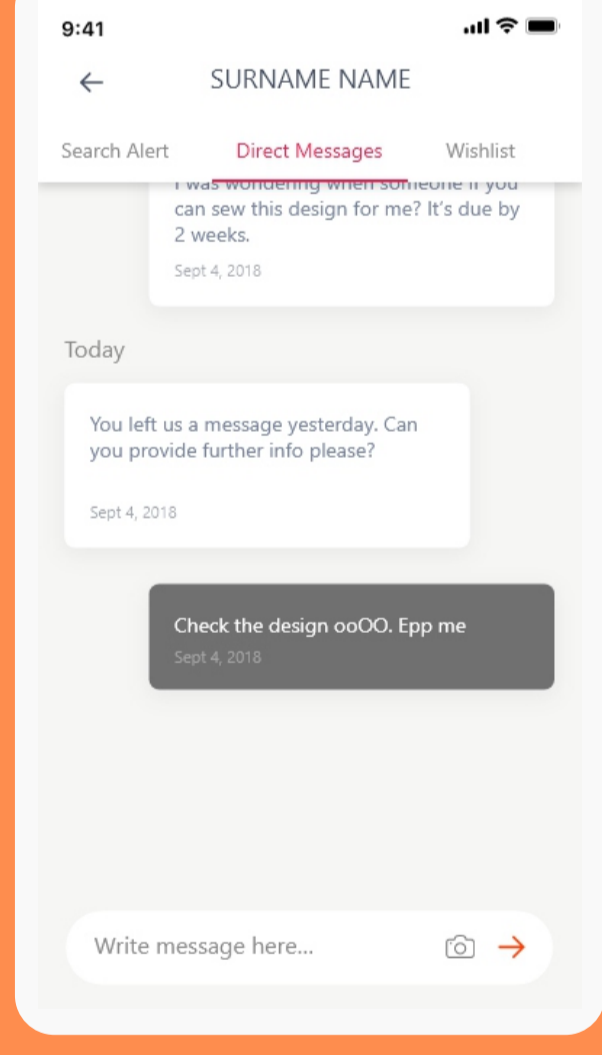

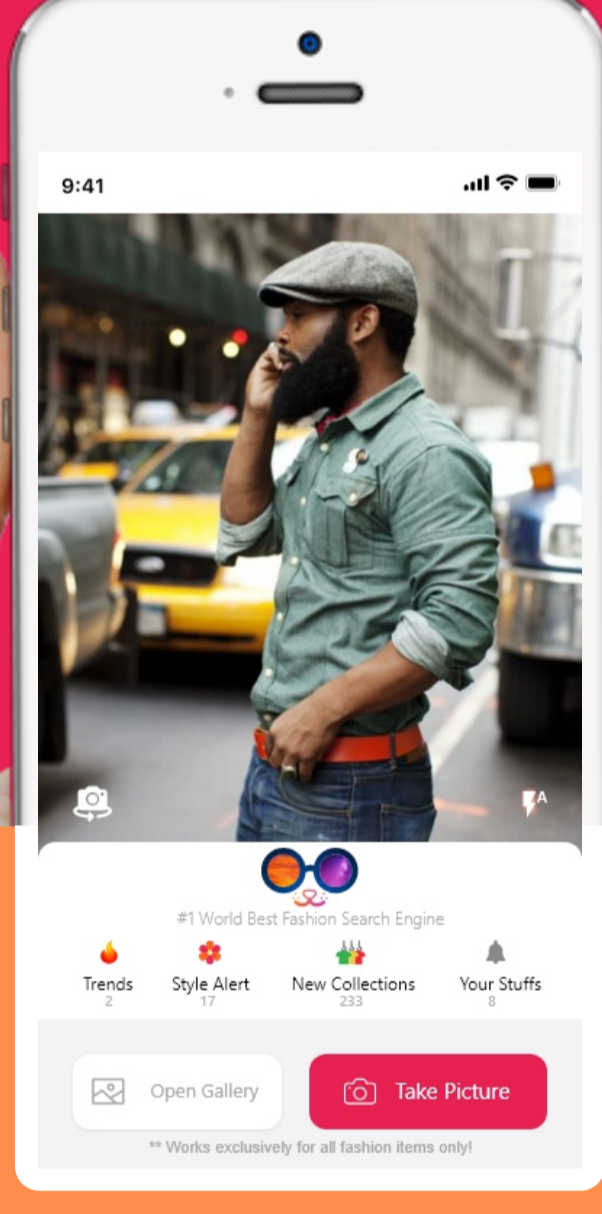

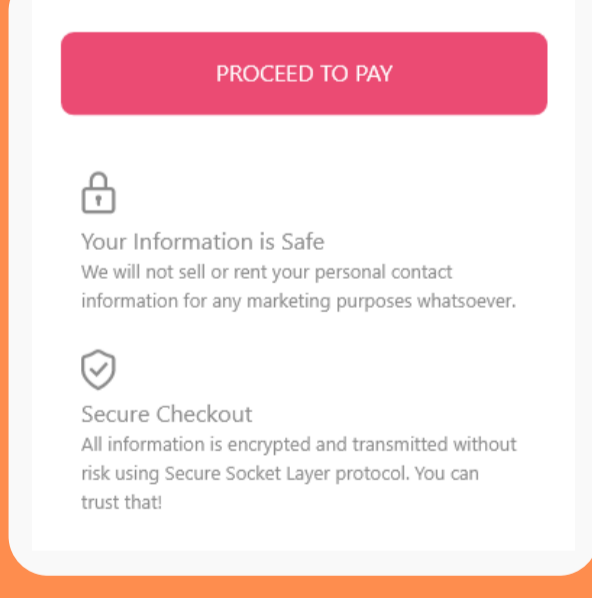

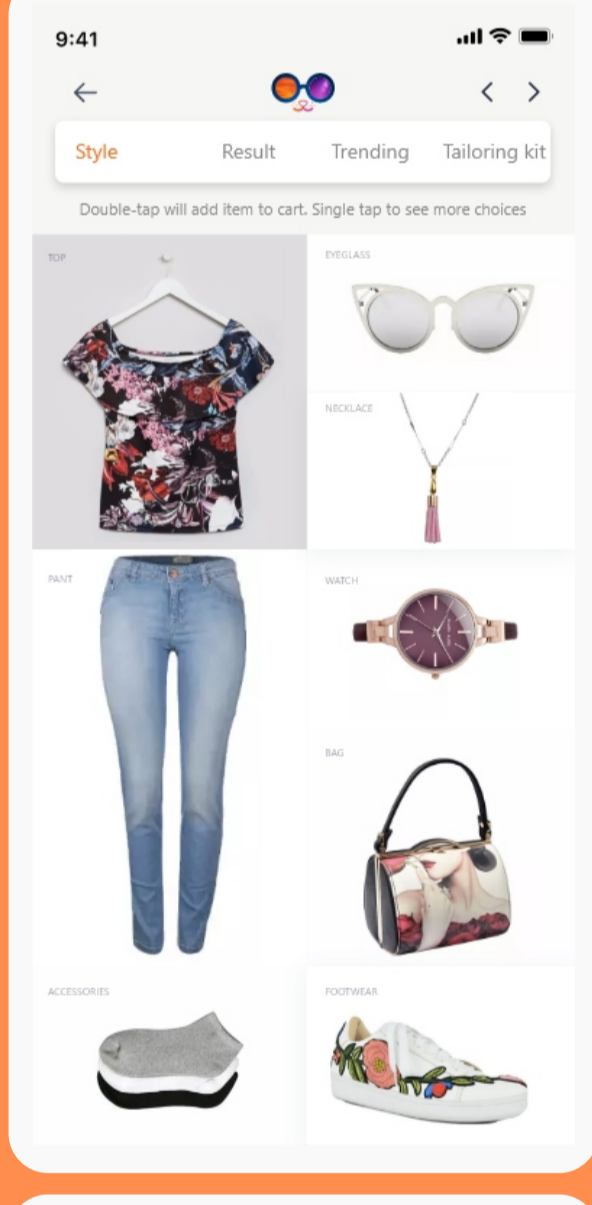

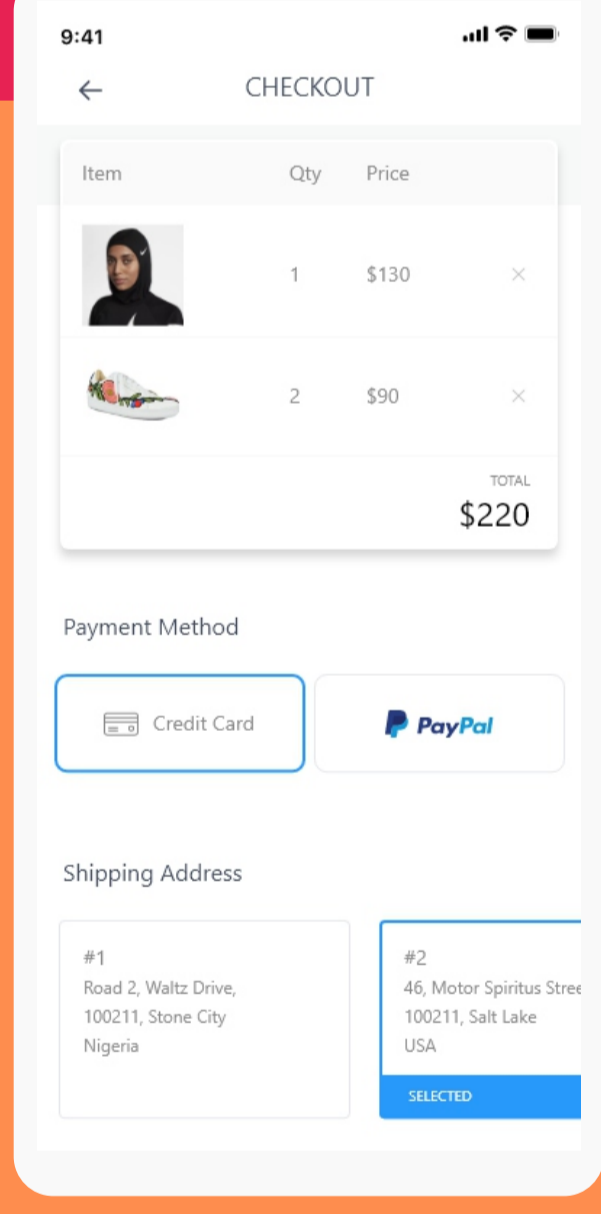

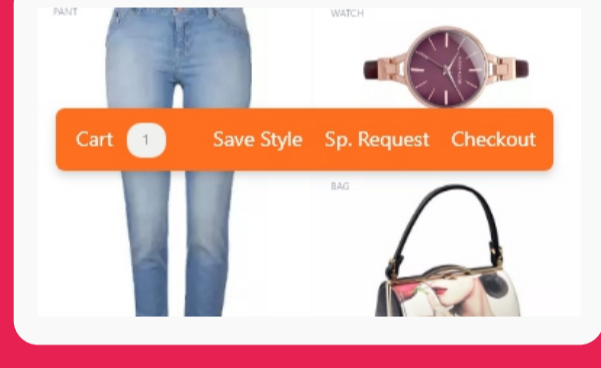

Having an idea is good, but converting that idea into a product is much more valuable. Our aim is to research the problem in order to understand the users who have this problem and how best to solve it for them. We approach design from a functional point of view first, the results is then layered with a beautiful interface.

Development

Our development team will ensure to convert the wireframe mockup into a functional app for your business. While there are plethora of coding tools and web services to achieve your functional requirements, we will help you choose the one that fits your specific and long-term needs.

Solution

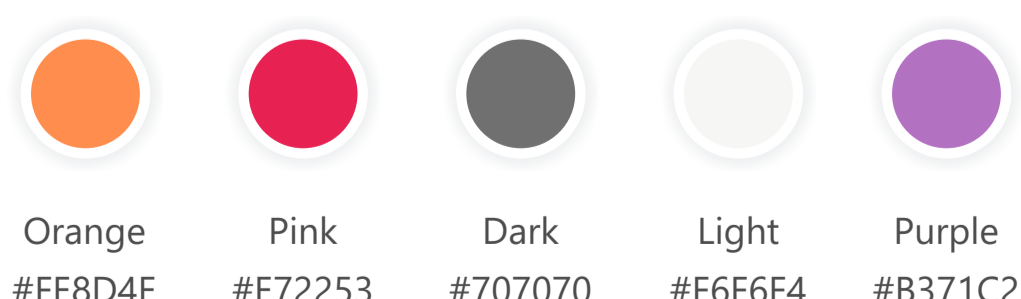

Branding

For a fee, we can help develop your business branding pack: catchy name, logo mark, color template, e-fliers, print fliers, biz cards, email signature, general graphic design, etc.
